

GCDAMP: Locations and Geography

Proposed Course Material: The GCDAMP has a defined geographical scope. Within this scope, there are key locations and places that are discussed in the GCDAMP world. I.E. Meetings, reports, presentations. The purpose of this course [Locations and Geography] is to provide a basic overview of specific places and locations that are linked directly to the GCDAMP. Also to be included, is an explanation as to why this location is important to the Program. *So everyone is speaking the same language.

Please review the suggested learning locations below, and check the boxes you feel should be included in the Locations and Geography course. – And/or tell us what locations you would add to the list. *From a new person’s perspective to the GCDAMP, what location terms and places should I know to better understand the GCDAMP “language”?

- Lake Powell- Glen Canyon Dam
- Lake Mead- Hoover Dam
- Lees Ferry- gage- fishery
- Paria River
- Lower Colorado River (LCR) - RM 61-62,
